Correction to “What’s in a Name? Perceptions of Stray and Feral Cat Welfare and Control in Aotearoa, New Zealand”

Mark J. Farnworth, Joanna Campbell, and Nigel Adams
2011, Volume 14, Number 1, pp. 59–74

The authors would like to indicate a correction to Figure 2 in this article. The final two box plots had been accidentally switched during its creation resulting in the presented Figure 2 contradicting the statement that the importance of cat welfare during control events differs between groups of cats with “companion” cats at the highest end through to “stray” cats and finally “feral” cats. The preceding statement is factually correct for this research as reflected in this correction.

The corrected Figure 2 is printed on the following page.
FIGURE 2  Respondents’ ($n = 354$) ranking of the importance of conservation, disease transfer, and impact on companion, stray, and feral cat welfare as rationales for the control of stray and feral cats. Bar represents median value, asterisk denotes statistical significance using a Wilcoxon signed rank test ($Z = -7.223$, *$p < .0001$).
